Overview

Countries are essential for configuring location-specific settings and ensuring compliance, localization, and efficiency in global operations. The ERP contains a list of over 250 countries.

Countries **cannot** be **added** or **deleted** by users.

They are used to define tax rules, such as VAT and to ensure transactions align with local legal requirements. Countries standardize address data for users, customers, vendors, and internal locations, facilitating smooth shipping and billing processes.

Countries are linked with currencies for multi-currency financial operations. Additionally, they are used in global reporting, helping organizations analyze and manage performance across regions effectively.

Update existing country

This action requires the "Update countries" permission.

Most information regarding countries is automatically added when a new ERP instance is created. All of this information, however, can be updated later if necessary.
