Cache

The **Cache** page is one of the developer tools.

On this page, users with access can clear/refresh cached data from the server manually by entering the corresponding cache key. Cached data includes, among other, the dinning menu, internal and external announcements and custom configurations.

The screenshot shows the 'Cache' developer tool interface. At the top, there's a header with a 'Cache' tab and a hamburger menu icon. Below the header, there's a search bar labeled 'CACHE KEY' containing the text 'custom-models'. To the right of the search bar are three orange buttons: 'Search', 'Clear Cache', and 'Refresh Cache'. Below the search bar, there's a large white area displaying a JSON-like structure. It starts with a collapsed 'data' array: 'data: [5]'. When expanded, it shows five items, each with an index and an object: '0: { ... }', '1: { ... }', '2: { ... }', '3: { ... }', and '4: { ... }'. At the bottom, there's a section labeled 'Cache data (raw response)' with a dropdown arrow.

Cache refreshing is performed automatically in set intervals. Manual clearing should be performed only when absolutely necessary.
