# Copy model file manager tool

This tool is used for copying whole file manager contents between any two entries in the ERP.

The screenshot shows the 'Copy model file manager' tool interface. At the top, there are three tabs: 'File Uploader', 'Copy model file manager' (which is active and highlighted in orange), and 'Batch copy model file manager'. Below the tabs, the title 'File manager copier' is displayed in orange. There are two checkboxes: 'COPY TO A DIFFERENT MODEL TYPE' (checked) and 'DELETE FILES ON SOURCE MODEL' (unchecked). An orange 'Copy files' button is located to the right of these checkboxes. Below the checkboxes, there are two main sections for selecting source and target models. The left section is labeled 'SELECT MODE TO COPY FROM' and shows 'FIXED ASSETS' as the selected model type. Below this, a dropdown menu shows 'COPY FROM 5762'. The right section is labeled 'SELECT MODE TO COPY TO' and shows 'BOM' as the selected model type. Below this, a dropdown menu shows 'COPY TO 5824'. Both sections have a search bar and a list of files/folders. The left section shows 'All files' and 'Folders' with a 'No files' message. The right section also shows 'All files' and 'Folders' with a 'No files' message.

This tool allows copying of file manager between entries of different models. To enable this, tick the "**Copy to a different model type**" checkbox.

First, select the source model type from the list of supported and then select the source entry of that model type from the "**Copy from**" drop-down.

Then, repeat the same process for the target entry, selecting the source model (if copying to different model type) and selecting the "**Copy to**" entry.

When entries are selected, their file manager is displayed under them to provide a preview of their file managers.

Clicking on the "**Copy files**" button will copy files from source entry to the target entry.

If the "**Delete files on source model**" checkbox is ticked when the "**Copy files**" button is clicked, the files on the source entry will be deleted.

# Batch copy model file manager tool

This tool is used for copying whole file manager contents between several entries of the same model type at a time.

This tool allows copying of file manager between multiple entries of the same model.

Copy model file manager

Batch copy model file manager

File manager copier (batch)

SUPPORTED MODEL  
Select a model...

Import from list

Map ID to ID (3)

Add new row

1	COPY FILE MANAGER CONTENT FROM ID	COPY FILE MANAGER CONTENT TO ID	X
2	COPY FILE MANAGER CONTENT FROM ID	COPY FILE MANAGER CONTENT TO ID	X
3	COPY FILE MANAGER CONTENT FROM ID	COPY FILE MANAGER CONTENT TO ID	X

☐ DELETE FILES ON 'COPY FROM' ENTRY

Copy files

First, select the source model type from the list of supported.

Then, enter the source (*copy from*) and target (*copy to*) IDs in the "**Map ID to ID**" section.

Map ID to ID (1)

Add new row

1	<div>COPY FILE MANAGER CONTENT FROM ID 2154324</div>	<div>COPY FILE MANAGER CONTENT TO ID 54325432</div>	X
---	--	---	---

☐ DELETE FILES ON 'COPY FROM' ENTRY

Copy files

You can also paste a comma-separated lists into the **"Import from list"** form to import values into the **"Map ID to ID"** section.

Take notice of ID position in the "copy to" and "copy from" lists while importing values form lists. Check all imported data in the mapping section before running the copying function.

Import from list

Import will overwrite existing ID to ID mapping.

MOVE FILE MANAGER CONTENT FROM ID  
1,2,3,4,5,6,7,8,9

MOVE FILE MANAGER CONTENT TO ID  
2,3,4,5,6,7,8,9,10

Import from list

Clicking on the **"Copy files"** button will copy files from every source entry to the target entry.

If the **"Delete files on source model"** checkbox is ticked when the **"Copy files"** button is clicked, the files on the source entry will be deleted.
