

Cache

The **Cache** page is one of the developer tools.

On this page, users with access can clear/refresh cached data from the server manually by entering the corresponding cache key. Cached data includes, among other, the dining menu, internal and external announcements and custom configurations.

The screenshot shows the 'Cache' developer tool interface. At the top left, there is a 'Cache' tab with a hamburger menu icon. To the right are a grid icon and a notification bell. Below the tab is a search bar labeled 'CACHE KEY' containing the text 'custom-models' and a red asterisk. To the right of the search bar are three orange buttons: 'Search', 'Clear Cache', and 'Refresh Cache'. The main area is a large white box with a light gray border. It contains a small icon of a pencil and a trash can. Below that is a dropdown menu labeled 'data: [5]' with five items: '> 0: {...}', '> 1: {...}', '> 2: {...}', '> 3: {...}', and '> 4: {...}'. At the bottom of the main area is a white bar with the text 'Cache data (raw response)' and a downward arrow.

Cache refreshing is performed automatically in set intervals. Manual clearing should be performed only when absolutely necessary.
