

Cache

The **Cache** page is one of the developer tools.

On this page, users with access can clear/refresh cached data from the server manually by entering the corresponding cache key. Cached data includes, among other, the dining menu, internal and external announcements and custom configurations.

The screenshot shows the 'Cache' developer tool interface. At the top left, there is a 'Cache' tab with a hamburger menu icon. To the right of the tab are a grid icon and a bell icon. Below the tab is a search bar labeled 'CACHE KEY' containing the text 'custom-models' and a red asterisk. To the right of the search bar are three orange buttons: 'Search', 'Clear Cache', and 'Refresh Cache'. Below these buttons is a large white area containing a JSON-like structure. It starts with a collapse icon and the text 'data: [5]'. Below this are five entries, each with a collapse icon and a key-value pair: '> 0: {...}', '> 1: {...}', '> 2: {...}', '> 3: {...}', and '> 4: {...}'. At the bottom of the interface is a section labeled 'Cache data (raw response)' with a collapse icon.

Cache refreshing is performed automatically in set intervals. Manual clearing should be performed only when absolutely necessary.
