

Copy model file manager tool

This tool is used for copying whole file manager contents between any two entries in the ERP.

The screenshot shows the 'File manager copier' tool interface. At the top, there are three tabs: 'File Uploader', 'Copy model file manager' (which is active and highlighted in orange), and 'Batch copy model file manager'. Below the tabs, the title 'File manager copier' is displayed in orange. There are two checkboxes: 'COPY TO A DIFFERENT MODEL TYPE' (checked) and 'DELETE FILES ON SOURCE MODEL' (unchecked). An orange 'Copy files' button is located on the right. Below these are two main sections for selecting source and target models. The left section is labeled 'SELECT MODE TO COPY FROM' and 'FIXED ASSETS'. It has a dropdown menu showing '5762'. The right section is labeled 'SELECT MODE TO COPY TO' and 'BOM'. It has a dropdown menu showing '5824'. Below these are two file manager views. Each view has a toolbar with icons for upload, download, delete, and search. The left view shows 'All files' and 'Folders' tabs, with a search bar and a list of files. The right view shows 'All files' and 'Folders' tabs, with a search bar and a list of files. Both views currently show 'No files'.

This tool allows copying of file manager between entries of different models. To enable this, tick the "**Copy to a different model type**" checkbox.

First, select the source model type from the list of supported and then select the source entry of that model type from the "**Copy from**" drop-down.

Then, repeat the same process for the target entry, selecting the source model (if copying to different model type) and selecting the "**Copy to**" entry.

When entries are selected, their file manager is displayed under them to provide a preview of their file managers.

Clicking on the "**Copy files**" button will copy files from source entry to the target entry.

If the "**Delete files on source model**" checkbox is ticked when the "**Copy files**" button is clicked, the files on the source entry will be deleted.
