

2026-09-28

- Users can now view and add comments to past status changes directly within the history timeline.
- Required status comments are now protected from deletion to ensure workflow records remain complete.
- Added a print button and quantity unit display to Internal Stock Service records.
- Introduced automatic warnings when the entered quantity does not match the number of selected serial numbers.
- You can now select a specific Goods Receipt when logging internal stock entries by SKU.

Here are the updates for version 1.711.0:

- **Task Sequence Control:** Added a new setting to ensure production tasks cannot be started until all previous operations for that item are finished.
- **Export Notifications:** Added a helpful alert to notify you if your browser blocks a pop-up when you are trying to export a file.
- **Improved Connection Reliability:** Enhanced the system's ability to stay connected for real-time updates by adding automatic retries for background tasks.
- **Cleaner Error Reporting:** Refined system messages to hide technical "Unknown Error" pop-ups for internal background processes, reducing unnecessary interruptions.
- Added a new "Tags" field to the Sales Order form.
