

2026-10-12

Here are the updates for version 1.723.0:

- **Service Error Email Notifications:** You can now set up automated email reports for specific service errors within a production facility to notify the relevant teams immediately.
- **Enhanced Robot (AGV) Monitoring:** The robot control panel now displays status badges explaining exactly why a delivery is blocked or waiting, such as "no free carts" or "waiting for release."
- **Improved Work Order Tracking:** Added new columns for tracking RMA and internal service statuses, assigned coordinators, and detailed material availability (including incoming, reserved, and used quantities).
- **Refined License Management:** To prevent errors, the option to link software licenses is now only visible for items categorized as software in sales orders.
- **Simplified Product Forms:** Cleaned up product information by removing the "Screw box number" field and reorganizing software-related settings into a more logical layout.
