

2026-10-22

Here are the latest updates for the ERP:

- **Work Instruction Alerts:** Workers will now see a notification if work instructions have been updated. The system highlights exactly which slides have changed and displays any relevant notes from the approval process.
- **Shipping List Enhancements:** You can now link and view issued invoices directly from the shipping list.
- **CNC Work Order Improvements:** Refined how resources and tools are assigned to products when creating CNC work orders to ensure more accurate tracking.
- **Enhanced Documentation:** Added a comprehensive set of new user guides covering AGV robots, financial analysis, stock rebooks, and the login process.
- **Task Management:** Improved the "Paused" task window to ensure it functions more reliably when resuming work.
- **Login & Security Guides:** Added new troubleshooting and walkthrough guides for Multi-Factor Authentication (MFA) and common login issues.
- **Stock Reporting:** New help guides are available for managing negative stock and understanding obsolete stock reports.
- **Multi-User Editing:** Added visual indicators to show when multiple people are editing the same form simultaneously to help prevent conflicting changes.
