

2026-10-23

Here are the updates for this release:

- **Work Instruction Alerts:** Workers will now see a warning notification if work instructions for a product have been updated. These changes must be acknowledged before they can proceed with the task.
- **Instruction Highlights:** Modified pages within work instructions are now clearly highlighted, making it easier for workers to identify exactly what has changed.
- **Enhanced Shipping Lists:** Issued invoices are now visible and accessible directly from within the Shipping List records.
- **Expanded User Documentation:** Added a comprehensive set of new help guides covering AGV robots, warehouse operations, HR management, and financial reporting.
- **CNC Resource Management:** Improved the way resources and equipment are linked when creating new CNC work orders.
- **Login & Security Support:** New step-by-step guides are now available to assist with first-time login, password resets, and setting up multi-factor authentication (MFA).
- **Conflict Prevention:** The system now clearly indicates when multiple people are editing the same form and prevents accidental overwrites if someone else saves their changes first.

Here are the updates for version 1.730.0:

- **Work Instruction Alerts:** Added a notification system that alerts workers when work instructions have been updated. Users can now see exactly which slides were changed and must acknowledge the updates before continuing.
- **Documentation Expansion:** Added a large collection of new help guides covering AGV robot management, financial analysis, fixed assets, inventory rebooks, and HR profile management.
- **Shipping List Improvements:** Shipping lists now support viewing and linking issued invoices directly from the form.
- **CNC Work Order Resources:** Improved how resources are assigned when creating CNC work orders to better track user-defined requirements.
- **Login & Security Guides:** Added new documentation for multi-factor authentication (MFA) setup and login troubleshooting.
- **Financial Reporting Guides:** New step-by-step instructions are available for comparing financial statements across different countries and building custom financial reports.
- **Inventory Management Docs:** Added comprehensive guides for handling goods receipts, transfers, and write-offs.
- **Task UI Enhancements:** Improved the "Task Paused" window to ensure better focus and visibility when resuming work.

Here are the latest updates to the ERP:

- **Work Instruction Alerts:** Workers will now see a notification when product work instructions have changed. Updated slides are highlighted to ensure important changes are reviewed before proceeding.
 - **Expanded Help Documentation:** A comprehensive internal help guide has been added, covering almost every module including AGV robots, Finance, HR, Inventory, and Sales.
 - **Shipping List Enhancements:** You can now view and manage issued invoices directly from within the shipping list.
 - **Improved Security Guidance:** The login process now includes clearer instructions and troubleshooting tips for setting up multi-factor authentication (MFA).
 - **Dashboard Updates:** The home dashboard now features categorized company news, weather updates, and a company reward system tracker.
 - **CNC Work Order Resources:** Refined how resources are assigned when creating CNC work orders to ensure more accurate tracking.
 - **Navigation Shortcuts:** New guidance is available for using system-wide shortcuts, such as Global Search (Ctrl+S) and the "Go To" page navigator (Ctrl+K).
 - **Collaboration Indicators:** The system now clearly shows when multiple people are editing the same form to help prevent conflicting changes.
