2026-11-05

Here is the changelog for version 1.738.0:

- **Improved RMA Estimates:** Added a notification in External Services that explains exactly why certain estimate calculations (like labor or material costs) might be hidden due to missing permissions or price lists.
- **Serial Tree Search:** Introduced a new search bar in the Serial Tree to quickly locate specific items by SKU, name, or serial number.
- **Original Currency Toggle:** Users can now view aging reports for partners and suppliers in their original currency instead of only the system's default currency.
- **Standardized Table Selection:** Updated several parts of the system—including Holiday generation and Work Order reservations—with a more consistent way to select rows and a "Select All" checkbox.
- **Status Field Fix:** Resolved an issue where status fields were showing incorrect information or were missing entirely for certain document types and users.
- **Faster Loading:** Optimized how the system loads data for RMAs and large serial trees, resulting in noticeably faster page response times.
- **Enhanced Contact Details:** Added helpful information popovers to department fields within contact forms.
- **Aging Report Totals:** Totals in aging reports are now automatically grouped and summed by their specific currency for better accuracy.

New Features & Improvements

- **Nested Product Documentation:** Introduced a new "Nested Documentation" viewer for Bills of Materials (BOM), allowing users to preview and activate combined documentation for all sub-components.
- **Google Docs Integration:** Added support for Google Docs as a template engine, enabling users to link documents by ID and pass custom parameters for automated document generation.
- **Work Order Enhancements:** Added new columns to Work Order lists, including "Work Order Total Amount," "Product Status," and "Product Short Name."
- **Warranty Certificate Generation:** Added a new feature to generate and download merged warranty certificates for entire sales orders directly from the items table.
- **Serial Number Management:** Introduced a direct button to generate and view warranty certificates for individual serial numbers within the serials popover.
- **Template Management:** Improved the template settings layout by grouping engine-specific options and adding a shortcut to open linked Google Docs.
- **Enhanced Item Lists:** Updated the Sales Order and Work Order item views with clearer labels for total amounts and improved status tracking.
- **Improved Printing Options:** Refined the document printing menus across various sections (Invoices, Partners, Shipping Lists) for more reliable document generation.
