2026-11-13

Changelog 1.743.0

- **New Access Editor Wizard:** Introduced a step-by-step tool to simplify creating and managing user roles and complex permissions.
- **Access Overview & Impact Preview:** Added a new dashboard to group users by shared access levels and preview how permission updates will affect them before saving.
- **Enhanced Work Order Pricing:** Work order items now display unit prices (with and without VAT) and currency exchange rates derived from the original sales order.
- **Linked Sales & Work Orders:** Sales order item forms now show a list of related work order items for easier tracking across departments.
- **Role Hierarchy Management:** Improved role settings to support "parent" and "child" relationships, allowing permissions to be inherited across different roles.
- **Improved Page Security:** Updated the system menu logic to ensure more consistent permission checks when navigating between different sections of the ERP.
- **Table State Preservation:** Expanded rows in tables are now tracked in the web address, allowing you to share links to specific views or maintain your place when navigating back.
- **Sales Order View Fix:** Resolved a bug where an experimental table layout was incorrectly appearing in the standard ERP view for sales orders.

Revision #1
