2026-11-17

New Features & Improvements

- **ISO & Compliance Module:** Introduced a new management system to centralize and track company documents, procedures, and certificates (such as ISO 9001 or GDPR).
- **Compliance Dashboard:** Added a high-level overview showing compliance progress across different company areas using colored status bars.
- **Document Organization:** You can now organize documents into custom "Areas" and "Groups," with the ability to drag and drop items to reorder them.
- **Tracking & Deadlines:** Added fields to track document owners, responsible departments, review intervals, and specific expiration deadlines.
- **Document Register:** Introduced a searchable table view of all compliance documents that allows for advanced filtering and exporting to Excel.
- **Status Management:** Documents can now be assigned statuses (e.g., Compliant, Non-compliant, Pending) with a full history of changes and explanatory notes.
- **Invoice Enhancements:** Added "Product Classification," "Product Status," and "Bundled" indicators to the Issued Invoices item list.
- **Navigation Updates:** Improved the user interface with a new "ISO Portal" menu shortcut and added scroll arrows to navigation tabs when many are open at once.

Here are the changes in this update:

- **New Save Preview Summary:** Before saving a task, a new summary window shows exactly what will happen, including status changes, new tasks created, and emails that will be sent.
- **Redo Entry Feature:** You can now re-open and "redo" previous task entries to correct errors; saving a redo will replace the previous submission.
- **Active Redo Indicator:** A clear banner now appears when you are in "Redo" mode to remind you that your changes will replace an existing entry.
- **Goods Receipt Product Filtering:** The product search in Goods Receipts now only lists items that have stock tracking enabled, making it easier to find relevant products.
- **Stock Service Fix:** Improved the Stock Service internal modal to prevent it from creating duplicate or incorrect records during the save process.
- **Employee Vacation Display Fix:** Resolved an issue where vacation data was not loading correctly on user profile pages.
- **Improved Interrupt Notifications:** Enhanced the reliability and behavior of pop-up notifications that appear during active tasks.
- **Internal Service Links:** Added direct links to related Stock Service records within the task view for quicker navigation.
