

Update price on sale order item

This action requires the "**Update order sale items**" permission.

Prices on sales orders can be updated directly on items. If price lists are set up, prices can be automatically added from there.

Prices can be **only set on child** item. Price is then propagated to parent items.

Order items

Prices can be only set on child item.
Price is then propagated to parent.

+ Add new order item (Dewesoft Configurator)

You can **set item price to 0**. This should only be done for **included items**. These **will** then be marked as **"bundled"**.

There is also additional button if you have price lists setup

To change the price of a sale order item, go to "**Order items**" section and press the "+" button on the item you want to change. Click the "+" to open a section under the item, that lists all parts of the order item (sub-items, associated serials, licenses...).
