

# ERP Profile settings

Next to your profile photo, you can find some settings, that alter aspects of the ERP.

## Set password

This settings allows you to setup a update your password, or use "Login with Google only", which will allow you only login with google, "disabling" normal email & password authentication.

This form allows you to update your password or change to google-only login. It can be altered at any time.

### Security update required

To help keep your account safe, we're asking everyone to reset their password. It only takes a minute and helps protect your personal and company data.

#### Prefer Google login?

If you exclusively use Google Sign-In, we can remove your password and you'll only be able to log in with Google in the future. If you would ever need to use password, you can always use reset password form on user profile or login page.

 Login with Google only

or

#### Use ERP password

You may still need ERP password if you use some other application, that uses ERP in the background. Some examples of this are: Intrix, tools like calibrators or programators, direct ERP API use.

 Update password

(Click on date to add new workflow request.)

Keep in mind that while google login is simpler, email & password authentication is required for external applications, connected to the ERP.

## Locale settings

In these settings, you can change the language of the ERP. You can also select different date and number formats, depending on which you prefer.

The **settings** are **saved on your computer only**. If you log in on a different computer, the settings will need to be set again.
