

Permissions

- [Overview](#)
- [Create a new permission](#)
- [Update an existing permission](#)
- [Delete permission\(s\)](#)

Overview

Permissions are used to limit and provide access for users within the ERP system.

TIP: Permissions can be assigned onto roles or onto users directly, although this is discouraged, as roles provide easier trackability of what user has what permissions..

Create a new permission

To create a new permission, navigate to the "Add new authorization permission" form by clicking the "+" button in the top right above the table or by visiting the ["Add new permission form"](#) directly.

The screenshot shows a form titled "Add new authorisation permission". It has a tab labeled "Basic information". The form contains three input fields: "NAME" with the value "Test tasks", "SLUG" with the value "tasks-test", and "GROUP" with the value "tasks". There is a red star icon next to the "NAME" and "SLUG" fields, and a red 'x' icon next to the "GROUP" field. Below these fields is a "DESCRIPTION" field with the value "Allows testing of tasks, used in the ERP". At the bottom right of the form, there is a checkbox labeled "After save, create another" and a "Save" button.

When creating a new permission, a unique name is required, alongside a corresponding permission slug. The slug is how the permission will be called during checks.

The screenshot shows a search bar with the text "templ" and a list of templates below it. The templates are: "document-form-templates", "notification-templates", "price-templates", "template-types", and "templates". Each template has a checkbox and a right-pointing arrow next to it.

Defining the group that the permission belongs to, is not necessary but is encouraged, as it makes it easier to find the new permission while searching for it.

TIP: Description is not strictly required, but should be added when possible, to describe what the permission is used for.

Update an existing permission

Permissions should be updated only by people, who know their purpose, as permissions are used to grant access to a parts of the ERP .

To edit an existing permission, find it in the permissions table and click on its **Edit** button.

<input type="checkbox"/>	ID ▾	NAME	DESCRIPTION	SLUG	ROLES	GROUP	ACTIONS
<input type="checkbox"/>	6619	Test tasks	Test the systems tasks functionality.	tasks-test			 
<input type="checkbox"/>	ID ▾	NAME	DESCRIPTION	SLUG	ROLES	GROUP	ACTIONS

Showing 1 to 50 of 1 entries | Show **5** 10 25 50 100 per page

On the permission's page, you can update its name, description and group, that's used to show grouped permissions in permissions section on user and role page.

It is not recommended to update a permission's slug, as it may be used for programmatic access control.

Delete permission(s)

Permissions should only be deleted by people, who understand their purpose and know the permission's uses.

To delete a permission, find it in the "[Permissions](#)" table and tick its checkbox. Then click and confirm the "**Trash**" button, that appears above the table.
