

Create a new permission

To create a new permission, navigate to the "Add new authorization permission" form by clicking the "+" button in the top right above the table or by visiting the ["Add new permission form"](#) directly.

Add new authorisation permission

— Basic information

NAME *
Test tasks

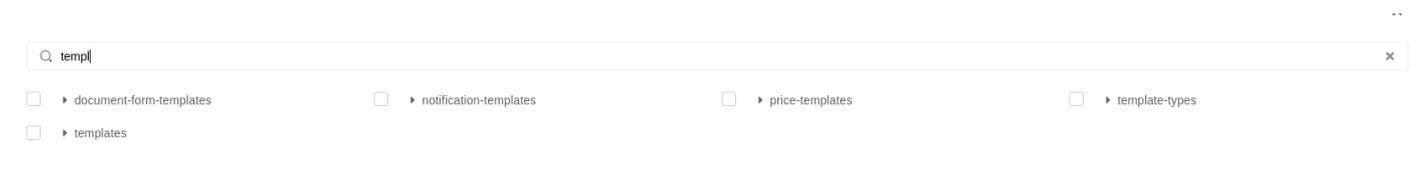

SLUG * tasks-test

GROUP *
tasks

DESCRIPTION
Allows testing of tasks, used in the ERP

After save, create another **Save**

When creating a new permission, a unique name is required, alongside a corresponding permission slug. The slug is how the permission will be called during checks.

Q templ

- document-form-templates
- notification-templates
- price-templates
- template-types
- templates

Defining the group that the permission belongs to, is not necessary but is encouraged, as it makes it easier to find the new permission while searching for it.

TIP: Description is not strictly required, but should be added when possible, to describe what the permission is used for.
