

Overview

Goods transfers provide an easy way to transfer products (goods) between warehouses and warehouse locations within the ERP.

Goods transfers allow users to quickly and efficiently perform movements of inventory, ensuring accurate tracking of stock and maintaining real-time visibility across all warehouse locations.

Goods transfers

Goods transfers can be initiated for various purposes, such as restocking, fulfilling production requirements, reserving material for work orders or reallocating inventory to meet demand. The system supports detailed documentation of these transfers, including quantities, transferred items, source and destination warehouse locations and a short description, ensuring transparency and intuitive **trackability** in conjunction with **stock transactions**.
